

Automated E-Mail Encryption

Communicate with Confidence: E-mail has become one of the most important and widely used means of communication today. It provides the ability to communicate more efficiently and effectively with your customers, clients and business partners. However, this also places your most sensitive and critical data at risk.

Anytime an e-mail is sent, the data in that e-mail are at risk. The cost of average data breach has risen 43 percent since 2005, to an average \$197 per data record compromised. This is an average cost of \$6.3 million per breach.*

That is why ACS Encryption Services has implemented Automated E-Mail Encryption. This service ensures all e-mails that contain confidential and sensitive information are encrypted.

With Automated E-Mail Encryption, every outbound e-mail message is automatically scanned for compliance and content. Messages matching the policies are encrypted, and then delivered to the recipient. The solution is seamlessly integrated with your existing e-mail application.

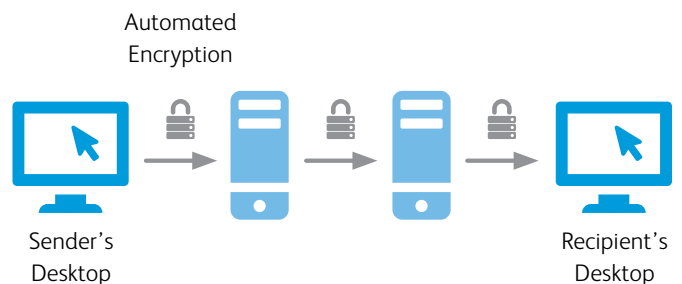

Ensuring Your Data Are Safe and Secure

We manage highly sensitive information for our own employees, our clients, and our clients' customers and constituents. Exposure of this information can result in financial loss, legal ramifications and brand damage. That is why we have developed a solution to provide e-mail encryption services to our clients and their employees.

We've implemented these safeguards to not only protect our interests, but also to retain relationships and build trust. We all need to be concerned about securing confidential information.
